

Thirst

Etymologically thirst derived from burn.

The dancers wheeze and drink, they burn from thirst.

Drinking to staying.

The search of stillness consists in finding the amount (qualitative amount)
of mobility in the still.

What's more still than a wheeze stillness and what's more mobile?

movement

standstill

movement

standstill

again movement

reaching

Stillness is not in the still but it's in the middle between still and movement.

Pose.

Compressed movement.

There is more dance in those baroque poses than in the movement itself.

The possibility of movement is more exciting than the movement itself and
this possibility starts from the exposure of the bodies and from what they need to
stand still, the water.

Maybe the quiet water is what more than anything else could represent
this playful exposure of bodies.

The body is thirsty.
